

About me:

I am a third year MMath student.

My favourite theorem is **Roth's theorem**, although **Baire category theorem** is a close second!

Why me?

- I have previous experience in an exec position, as Vice President for Warwick Chess Society this past year. Running the teams participating in the Coventry league as well as organising the trip to the British University Championships successfully makes me confident I can deliver a well organised maths café.
- I enjoy working on maths with other people in my spare time—some of you may know me from discord as Skiwi. An essential part of the role is helping students with math content at maths café, I believe I am well placed to do so having achieved an average of 88% across my first 2 years.
- Started in first year on a joint degree before transferring to maths in my second year, making me knowledgeable about how the different maths streams work.

Aims

- Maintain a fixed schedule for Maths Café like this year, continuing the excellent work of the current Academic Supports. As well as providing a friendly environment for people to ask questions, academic or otherwise.
- Run an integration bee workshop in preparation for Round 1. This year I was part of the highest scoring Warwick team at Round 2.
- Increase the number of revision lectures, running them for all year 1&2 core modules.
