

——VOTE——
JAMIE V.L.
——FOR FREP——

WHY I CARE

As a fresher, I'll be experiencing the same challenges and opportunities as the people I represent. Balancing social and academic life can be difficult and as a MathsPhys student I know my classmates and I have struggled these few weeks. But societies aim to combine both aspects. For many, this is where they'll meet lifelong friends and for others, where they'll find their next career opportunity. Societies should be a hub for growth in all areas of our lives and I wish to contribute to the impact they make on students.

WHAT I'LL DO

As your fresher's representative, I'll work to make sure your voices are heard. I want to listen to your ideas, take your feedback seriously, and communicate your suggestions to the rest of the committee. I'll be actively checking in with members during events for feedback and feel free to send me an email should you want to voice your opinion more discreetly. Additionally, I'll work to implement an anonymous feedback form on the society website. MathSoc has the potential to become a big part of our university experience and I wish to make it the best experience possible for everyone.

I'm in the midst of this transition alongside you and just as I wish to find my community I'd like to help you find yours, hopefully in MathSoc. Whether you're interested in socials, academic talks, careers or circles, there should be a place for everyone in MathSoc. Events like society inter-team competitions, group study sessions and talks with older students about their experiences would be some of the events I'd attempt to organise for freshers. And with your feedback, I'd work to encourage and organise more events that appeal to different groups, making our society much easier to access, especially for people still on the fence about joining or too nervous to attend.

If you want a representative who understands the fresher experience, values your ideas, and wants to make maths society about more than just maths, I'd really appreciate your vote!

Although the first year doesn't count to our degree, it can count to us
